## NIH $\rangle$ NATIONAL CANCER INSTITUTE

## IDENTIFICATION OF TOP FOOD SOURCES OF VARIOUS DIETARY COMPONENTS

This report includes analyses that were originally published online as references for the 2010 Dietary Guidelines for Americans Advisory Committee. The information contained in this report about top sources of dietary components informed the 2010 Dietary Guidelines for Americans (available at https://health.gov/dietaryguidelines/dga2010/ DietaryGuidelines2010.pdf).

## Introduction

Understanding what foods contribute to energy, nutrient, and food group intake enhances our ability to monitor diets relative to recommendations and gives context for dietary guidance. Examining the top sources of dietary constituents that should be reduced is especially helpful for identifying targets for changes in the marketplace and food environment.

The purpose of the research described in this report was to identify the weighted population contributions of specific foods to food group intakes, beverage intake, and other selected dietary components among the U.S. population aged 2 and older.

The top food sources of the dietary components listed in this report have been identified using data from the 2003-2004 and 2005-2006 National Health and Nutrition Examination Survey (NHANES). Because the analyses were conducted based on separate requests of the 2010 Data Analysis Team for the Dietary Guidelines, the information presented in the findings, figures, and tables that follow may vary in method. For example, some dietary components are analyzed only in children and adolescents. Others vary in stratification by age group, gender, race/ethnicity, and family income. In addition, the data are often presented in multiple ways. For example, both the percentage contribution (e.g., $5.3 \%$ of energy from soda) and the mean contribution (e.g., 114 kcal from soda) of various foods to each dietary component might be included.

Note that rankings depend in part on how ubiquitously the specific food is consumed. Foods that are the richest sources of nutrients and food components are not necessarily the major contributors. Because some foods are commonly consumed in the population, they result in a significant contribution to the total intake. Also, readers should note that the mean contribution of a food represents the average per capita (this average may not be calculated for all components in this report). For example, all persons ages 2 and older consume an average of 7.5 teaspoons of added sugars from soda, energy drinks, or sports drinks per day. If the analysis were restricted to only those people who reported drinking such beverages on a given day, the average intake of added sugars from those beverages would be higher.

The dietary intake data collected in the survey were cataloged according to discrete food codes. For this analysis, food codes representing similar foods-such as the various types of pasta dishes-were combined to provide an indication of the contribution of distinct food items to intake of the dietary components being studied. That is, the food codes were sorted into 96 mutually exclusive categories, termed "specific foods."

An example of the methods used for these analyses and results are described in detail in the following publication:
Reedy J, Krebs-Smith SM. Dietary sources of energy, solid fats, and added sugars among children and adolescents in the United States. J Am Diet Assoc 2010 Oct; 110 (10):1477-84.

## Food and Beverage Lists

List of Specific Foods: Result of Grouping Like Foods Reported in NHANES ${ }^{\text {a }} \mathbf{2 0 0 3 - 2 0 0 6}$

## Beverages

- Whole milk
- Reduced-fat milk
- Skim milk
- Vegetable juice
- $100 \%$ fruit juice, not orange/grapefruit juice
- $100 \%$ orange/grapefruit juice
- Fruit drinks
- Soda, energy and sports drinks ${ }^{\text {b }}$
- Milk substitutes and evaporated milk
- Alcoholic beverages
- Coffee
- Tea

## Bakery/Breads

- Hot cereal
- Pancakes/waffles/French toast
- Quick breads
- Ready-to-eat cereals
- Grain-based desserts ${ }^{\text {c }}$
- Yeast breads

Dressings, Spreads, and other Additions ${ }^{\text {d }}$

- Buttere
- Cream
- Margarine ${ }^{f}$
- Mayonnaise
- Miscellaneous solid fats
- Nondairy creamer/cream substitutes
- Oils ${ }^{\text {e }}$
- Salad dressing
- Sauces
- Sour cream
- Condiments
- Gelatins
- Jams and jellies
- Sugars/honey
- Syrups/toppings

## Produce

- Broccoli
- Carrots
- Coleslaw
- Corn
- Fried white potatoes
- Lettuce
- Onions
- Other cruciferous vegetables
- Other white potatoes
- Peas
- Spinach
- String beans
- Sweet potatoes
- Tomatoes
- Tomato sauces
- Vegetable medleys and other vegetables
- Vegetable mixed dishes
- Apples and pears
- Avocado
- Bananas
- Citrus fruits
- Dried fruit
- Grapes
- Melon
- Peaches/plums/apricots/nectarines
- Strawberries
- Other fruit and fruit salad

## Snacks

- Potato/corn/other chips ${ }^{f}$
- Popcorn
- Pretzels
- Nuts/seeds and nut/seed mixed dishes
- Candy
- Crackers

## Entrees

- Chili
- Mexican mixed dishes
- Pizza
- Soups
- Meal replacements
- Pasta and pasta dishes
- Rice and rice mixed dishes
- Egg rolls

## Refrigerator/Frozen

- Yogurt
- Cottage/ricotta/cream cheese
- Dairy desserts
- Frozen meals

## Deli

- Regular cheese
- Reduced-fat cheese
- Dried beans
- Burgers
- Cold cuts
- Eggs and egg mixed dishes ${ }^{9}$
- Tuna and tuna mixed dishes
- Shrimp and shrimp mixed dishes
- Other fish and fish mixed dishes
- Liver and other organ meats
- Beef and beef mixed dishes
- Chicken and chicken mixed dishes
- Duck and duck mixed dishes
- Other meat and meat mixed dishes
- Pork and pork mixed dishes
- Turkey and turkey mixed dishes
- Sausage, franks, bacon, and ribs
- Tofu and meat substitutes
a: NHANES = National Health and Nutrition Examination Survey
b: Includes sodas, energy drinks, sports drinks, and sweetened bottled water, including vitamin water.
c: Includes cakes, cookies, donuts, pies, crisps, cobblers, and granola bars.
d: Includes low-fat items such as low-fat salad dressings, cream cheese, and sour cream.
e: Butter, margarines, and oils do not include those used in yeast breads, grain-based desserts, quick breads, pancakes/waffles/French toast, dairy desserts, salad dressing, mayonnaise, pasta and pasta mixed dishes, Mexican mixed dishes, ready-to-eat cereal, crackers, pretzels, potato/corn/other chips, and candy.
f: Includes low-fat versions.
g: Excludes eggs found in grain-based desserts, pancakes/waffles/French toast, yeast breads, quick breads, dairy desserts, egg rolls, and pasta and pasta mixed dishes.

## List of Beverage Types: Result of Grouping Like Beverages Reported in NHANES² 2003-2006

## Beverages

- Whole milk
- Reduced-fat milk
- Skim milk
- Vegetable juice
- $100 \%$ fruit juice, not orange/grapefruit juice
- 100\% orange/grapefruit juice
- Fruit drink, regular
- Fruit drink, low-calorie
- Soda, regular ${ }^{\text {b }}$
- Soda, low-calorie ${ }^{\text {b }}$
- Milk substitutes and evaporated milk
- Alcoholic beverages
- Coffee
- Tea
a: NHANES $=$ National Health and Nutrition Examination Survey.
b: Includes sodas, energy drinks, sports drinks, and sweetened bottled water, including vitamin water.

## Key Findings

## Sources of Food Group Intakes Among the U.S. Population, NHANES 2003-2004

The MyPyramid food groups include whole fruit, fruit juice, dark green vegetables, orange vegetables, legumes, starchy vegetables, other vegetables, whole grains, non-whole grains, meat, poultry, fish, eggs, soy, nuts, seeds, milk, cheese, oils, solid fats, and added sugars.

- Children and adolescents do not consume fruits, vegetables, and grains in the proportions that are recommended. They consume more fruit juice, starchy vegetables, other vegetables, and non-whole grains-and less whole fruit, dark green vegetables, orange vegetables, legumes, and whole grains-than recommended.
- Americans do not, in general, consume the most nutrient-dense forms of basic foods groups, instead consuming foods that are high in solid fats and added sugars. The main culprits are soda and other sugar-sweetened beverages, pizza, grain-based desserts, non-skim dairy products, and fatty meats.

See Appendix A for additional data.

## Sources of Beverage Intakes Among the U.S. Population, NHANES 2005-2006

The beverage categories include whole milk, reduced-fat milk, skim milk, vegetable juice, 100\% orange/grapefruit juice, $100 \%$ fruit juice (not orange/grapefruit juice), regular fruit drinks, low-calorie fruit drinks, regular soda, lowcalorie soda, milk substitutes and evaporated milk, alcoholic beverages, coffee, and tea.

- Soda is the top beverage for all age groups, supplying more of both fluid weight (grams) and energy (calories) than any other beverage. Regular soda contributes $21 \%$ of the gram weight of beverages consumed by the U.S. population. Other sources of beverage intake include coffee (19\%), tea (12\%), alcoholic beverages (12\%), and low-calorie soda (10\%). Regular soda contributes $28 \%$ of the energy supplied by beverages. The proportion of energy supplied by coffee and tea is smaller (as would be expected based on calories), and alcoholic beverages ( $21 \%$ ), reduced-fat milk ( $13 \%$ ), and $100 \%$ fruit juice ( $10 \%$ ) form larger pieces of the pie.
- The distribution of intake (grams and calories) varied somewhat by age. For example, regular soda (33\%), reduced-fat milk ( $17 \%$ ), fruit drinks ( $13 \%$ ), $100 \%$ fruit juice ( $12 \%$ ), and whole milk ( $9 \%$ ) are major sources of the fluid weight of beverages consumed by children and adolescents. Alcoholic beverages and coffee contribute less than $2 \%$ of beverage intake for children and adolescents.
- The mean contribution (in teaspoons) represents the average per capita. For example, all persons age 2 and older consume an average of 7.5 teaspoons of added sugars from soda, energy drinks, or sports drinks per day. If the analysis were restricted to only those who reported drinking such beverages on a given day, the intake of average added sugars from those beverages would be higher.

See Appendix B for additional data.

## Macronutrients

## Sources of Saturated Fat, Stearic Acid, and Cholesterol-Raising Fat Among the

 U.S. Population, NHANES 2005-2006- For the most part, the major sources of cholesterol-raising fat are the same as those of saturated fat and stearic acid, although the rankings varied somewhat across the three types of fats.
- Saturated fat: The top five sources of saturated fat are regular cheese, pizza, grain-based desserts, dairy desserts, and chicken and chicken mixed dishes. Collectively, these sources contribute $31 \%$ of saturated fat.
- Stearic acid: The top five sources of stearic acid are grain-based desserts; regular cheese; sausage, franks, bacon, and ribs; chicken and chicken mixed dishes; and pizza. Collectively, these sources contribute $32 \%$ of stearic acid.
- Cholesterol-raising fat (defined as saturated fat minus stearic acid): The top five sources of cholesterol-raising fat are regular cheese, dairy desserts, pizza, chicken and chicken mixed dishes, and grain-based desserts. Collectively, these sources contribute $32 \%$ of cholesterol-raising fat.

See Appendix C for additional data.

## Sources of Selected Fatty Acids Among the U.S. Population, NHANES 2005-2006

- The top source of omega-3 fatty acids (18:3+20:5+22:6) was salad dressing, while the top source of DHA and EPA fatty acids (20:5 + 22:6) was other fish and fish mixed dishes.
- The foods that are the richest sources of a nutrient are not necessarily the major contributors. Because some foods are commonly consumed in the population, they result in a significant contribution to the total intake of a nutrient.

See Appendix D for additional data.

## Sources of Cholesterol Among the U.S. Population, NHANES 2005-2006

- The top five sources of cholesterol are eggs and egg mixed dishes, chicken and chicken mixed dishes, beef and beef mixed dishes, burgers, and regular cheese.

See Appendix E for additional data.
Sources of Protein Among U.S. Children and Adolescents, NHANES 2005-2006

- Among 2- to 18-year-olds, the top sources of protein intake contributing at least 5\% are chicken and chicken mixed dishes, pizza, reduced-fat milk, beef and beef mixed dishes, burgers, yeast breads, and pasta and pasta dishes. The major sources varied somewhat by age, gender, race/ethnicity, and income. For example:
- Rankings varied somewhat by age: Whole milk is a major contributor for 2- to 3-year-olds (10\%) and for 4- to 8 -year-olds (6\%).
- Rankings varied somewhat by race/ethnicity and income: The major contributors for Mexican-Americans include whole milk ( $7 \%$ ) and Mexican mixed dishes (7\%). Whole milk is also a top source (6\%) for 2- to 18-year-olds with a family income of $130 \%$ of the poverty income ratio.

See Appendix F for additional data.

## Sources of Carbohydrates Among U.S. Children and Adolescents, NHANES

 2005-2006- Among 2- to 18 -year-olds, soda is the top source of carbohydrate intake (11\%). Other sources contributing at least 5\% are grain-based desserts, yeast breads, pizza, ready-to-eat cereal, and fruit drinks. The major sources varied somewhat by age, gender, race/ethnicity, and income.
- Rankings varied somewhat by age: For example, the top source among 2- to 3-year-olds is $100 \%$ fruit juice (not orange/grapefruit juice) (11\%). Other foods contributing at least $5 \%$ for narrower age groups include pasta and pasta dishes for 2- to 3-year-olds (6\%), 4- to 8-year-olds (5\%), and 9- to 13-year-olds (5\%); and dairy desserts for 4 - to 8 -year-olds (6\%).
- Rankings varied somewhat by race/ethnicity: For example, the top source for non-Hispanic Blacks is fruit drinks (10\%) and a major contributor for Mexican-Americans is Mexican mixed dishes (7\%).

See Appendix G for additional data.

## Sources of Fiber Among U.S. Children and Adolescents, NHANES 2005-2006

- Among 2- to 18-year-olds, top sources of fiber intake contributing at least 5\% are yeast breads, Mexican mixed dishes, pasta and pasta dishes, pizza, ready-to-eat cereals, grain-based desserts, fried white potatoes, and potato/corn/other chips. The major sources varied somewhat by age, gender, race/ethnicity, and income. For example, apples and pears (6\%) and bananas (5\%) are major contributors for 2- to 3-year-olds, and beans (8\%) and apples and pears ( $5 \%$ ) are major contributors for all Mexican-American children and adolescents.

See Appendix H for additional data.

## Energy and Discretionary Calories

## Sources of Energy Among the U.S. Population, NHANES 2005-2006

- The top five sources of energy in the U.S. population are grain-based desserts ( 138 kcal per day), yeast breads ( 129 kcal per day), chicken and chicken mixed dishes ( 121 kcal per day), soda ( 114 kcal per day), and pizza ( 98 kcal per day). The major sources of energy vary by age, gender, and race/ethnicity, as follows:
- Rankings vary somewhat by age. For example, the top five sources of energy for 2- to 3-year-olds include whole milk ( 104 kcal per day), fruit juice ( 93 kcal ), reduced-fat milk ( 91 kcal ), and pasta and pasta dishes ( 86 kcal ). Pasta and reduced-fat milk are also among the top five sources of energy for 4- to 8-year-olds ( 97 and 95 kcal , respectively). Other top contributors include Mexican mixed dishes for 19- to 30-year-olds (146 kcal), alcoholic beverages for 31 - to 50 -year-olds ( 135 kcal ) and 51- to 70 -year-olds ( 83 kcal ), and dairy desserts and ready-to-eat cereals for individuals 71 years and older ( 78 and 57 kcal , respectively).
- Rankings vary somewhat among males. For example, a top source among males ages 71 and older is beef and beef mixed dishes ( 71 kcal ).
- Rankings vary somewhat by race/ethnicity. For example, major contributors for 2 - to 18 -year-old NonHispanic Blacks include fruit drinks ( $100 \mathrm{kcal} / \mathrm{day}$ ) and pasta and pasta dishes ( 90 kcal ), while MexicanAmericans' top sources include Mexican mixed dishes ( 136 kcal ) and whole milk ( 99 kcal ). Non-Hispanic Blacks and Whites consume more energy from sugar-sweetened beverages (combining soda and fruit drinks) than from milk (combining all milks), whereas Mexican-Americans consume more energy from milk than from sugar-sweetened beverages.

See Appendix I for additional data.
Sources of Calories From Solid Fats Among the U.S. Population, NHANES 2005-2006

- The average daily intake of energy from solid fats among 2- to 18 -year-olds is 433 kcal . The major sources of solid fat are pizza ( 50 kcal per day from solid fat), grain-based desserts ( 43 kcal ), whole milk ( 35 kcal ), regular cheese ( 34 kcal ), and fatty meats ( 29 kcal ). This list varies by age group, with younger children obtaining a greater share of their solid fat from both whole and reduced-fat milk and 14- to 18-year-olds getting more from fried potatoes.

See Appendix J for additional data.

## Sources of Calories From Added Sugars Among the U.S. Population, NHANES 2005-2006

- The average daily intake of energy from added sugars among all 2 - to 18 -year-olds was 365 kcal . The major sources of added sugars were soda (116 kcal per day from added sugars), fruit drinks ( 55 kcal ), grain desserts ( 40 kcal ), dairy desserts ( 29 kcal ), and candy ( 25 kcal ). The list does not vary markedly by age and demographic groups, but cold cereals were among the top sources for 2- to 8 -year-old children, Non-Hispanic Whites, and low-income groups.

## IDENTIFICATION OF TOP FOOD SOURCES OF VARIOUS DIETARY COMPONENTS

- Sugar-sweetened beverages (soda and fruit drinks) represented the top two sources of calories from added sugars among nearly all age and demographic groups. The consumption of added sugar from sugar-sweetened beverages was 60 kcal per day for 2 - to 3 -year-olds, 121 kcal for 4 - to 8 -year-olds, 169 kcal for 9 - to 13 -yearolds, and 260 kcal for 14- to 18-year-olds. Among all racial/ethnic and income groups, sugar-sweetened beverages contributed about $45 \%-50 \%$ of added sugars. Non-Hispanic Blacks obtained more added sugars from fruit drinks and less from soda than other groups.
- Rankings depend in part on how ubiquitously the specific food is consumed. Foods that are the richest sources of added sugars are not necessarily the major contributors. Because some foods are commonly consumed in the population, they result in a significant contribution to the total intake.
- The mean contribution (in teaspoons) represents the average per capita. For example, all persons age 2 and older consume an average of 7.5 teaspoons of added sugars from soda, energy drinks, and sports drinks per day. If the analysis were restricted to only those people who reported drinking such beverages on a given day, the average intake of added sugars from those beverages would be higher.

See Appendix K for additional data.

## Micronutrients

## Sources of Sodium Among the U.S. Population, NHANES 2005-2006

- The major sources of sodium in the U.S. population are yeast breads; chicken and chicken mixed dishes; pizza; pasta and pasta dishes; cold cuts; condiments; Mexican mixed dishes; sausage, franks, bacon, and ribs; regular cheese; grain-based desserts; soups; and beef and beef mixed dishes. These 12 food groups each supply over 100 mg sodium per person per day to the diet. Collectively, this relatively small group of foods contributes about $56 \%$ of the dietary sodium, or nearly $2,000 \mathrm{mg}$ per person per day.
- The major sources of sodium vary by age, gender, and race/ethnicity, as follows:
- The top five contributors of sodium for all persons are yeast breads ( 250 mg per day), chicken and chicken mixed dishes ( 233 mg per day), pizza ( 217 mg per day), pasta and pasta dishes ( 174 mg per day), and cold cuts ( 155 mg per day).
- Rankings varied somewhat by age. For example, the top source among 2- to 18-year-olds is pizza (295 mg per day); and among persons 19 and older, it is yeast breads ( 258 mg per day). Other foods in the top five for several narrower age groups include: sausages, franks, bacon, and ribs for 2- to 3-year-olds, 4- to 8-year-olds, 9 - to 13 -year-olds, and 51- to 70 -year-olds; Mexican mixed dishes for 19- to 30 -year-olds; grainbased desserts for persons 71 and older; and soups for 51- to 70 -year-olds and persons 71 and older.
- Rankings varied somewhat among males. For example, a major contributor among 14- to 18-year-olds is burgers ( 219 mg per day). Condiments is a top source among both 14 - to 18 -year-olds ( 224 mg per day) and 51- to 70 -year-olds ( 183 mg per day).
- Rankings varied somewhat among females. For example, salad dressing is a major contributor among 51to 70 -year-olds ( 105 mg per day), and ready-to-eat cereals is a top source among 2 - to 3 -year-olds ( 97 mg per day).
- Rankings varied somewhat by race/ethnicity. The top source is yeast breads for non-Hispanic Whites (271 mg per day), chicken and chicken mixed dished for non-Hispanic Blacks ( 311 mg per day), and Mexican mixed dishes ( 348 mg per day) for Mexican-Americans.
- Rankings depend in part on how ubiquitously the specific food is consumed. Foods that are the richest sources of sodium are not necessarily the major contributors. Because some foods are commonly consumed in the population, they result in a significant contribution to the total intake.
- The mean contribution (in milligrams) represents the average per capita. For example, all persons age 2 and older consume an average of 217 mg of sodium from pizza per day. If the analysis were restricted to only those people who reported eating pizza on a given day, the average sodium intake from pizza would be higher.

See Appendix L for additional data.

## Sources of Potassium Among the U.S. Population, NHANES 2005-2006

- The top five contributors of potassium for all persons are reduced-fat milk ( $154 \mathrm{mg} / \mathrm{day}$ ), coffee ( $135 \mathrm{mg} / \mathrm{day}$ ), chicken and chicken mixed dishes ( $119 \mathrm{mg} /$ day), beef and beef mixed dishes ( $94 \mathrm{mg} /$ day), and $100 \%$ orange/grapefruit juice ( $90 \mathrm{mg} / \mathrm{day}$ ). The major sources of potassium varied somewhat by age, gender, race/ethnicity, and family income. For example:
- Rankings varied somewhat by age: The top source among persons 19 and older is coffee ( $176 \mathrm{mg} / \mathrm{day}$ ). Other foods in the top five for several narrower age groups include: whole milk for 2-to 3 -year-olds, 4 - to 8-year-olds, and 9 - to 13 -year-olds; $100 \%$ fruit juice (not orange/grapefruit) for 2 - to 3 -year-olds and 4 - to 8-year-olds; pasta and pasta dishes for 2- to 3 -year-olds and 9 - to 13 -year-olds; skim milk for 2 - to 3 -year-olds; dairy desserts for 4 - to 8 -year-olds; fried white potatoes for 9 - to 13 -year-olds and 14 - to 18 -year-olds; potato/corn/other chips for 14- to 18-year-olds and 31- to 50 -year-olds; pizza for 14- to 18-year-olds; Mexican mixed dishes for 19- to 30 -year-olds; other white potatoes for 51 - to 70 -year-olds and persons 71 and older; and bananas for persons 71 and older.
- Rankings varied somewhat by gender: Bananas ( $88 \mathrm{mg} /$ day) are a top source among 2 - to 3 -year-old males, and soups ( $102 \mathrm{mg} / \mathrm{day}$ ) and tea ( $101 \mathrm{mg} /$ day) are top sources among 51- to 70 -year-old females.
- Rankings varied somewhat by race/ethnicity: The top source for non-Hispanic Blacks is chicken and chicken mixed dishes ( $152 \mathrm{mg} / \mathrm{day}$ ); and for Mexican-Americans, it is Mexican mixed dishes ( $188 \mathrm{mg} / \mathrm{day}$ ). Other foods in the top five include: fried white potatoes for non-Hispanic Whites ( $85 \mathrm{mg} / \mathrm{day}$ ) and non-Hispanic Blacks (102 mg/day); potato/corn/other chips (130 mg/day) for non-Hispanic Blacks; and whole milk (150 $\mathrm{mg} / \mathrm{day}$ ), beans ( $122 \mathrm{mg} /$ day), and soups ( $113 \mathrm{mg} /$ day) for Mexican-Americans.
- Rankings varied somewhat by income: Whole milk is among the top five sources for persons with a family income of $\leq 130 \%$ of the poverty income ratio (PIR) ( $129 \mathrm{mg} /$ day ) and $131 \%-185 \%$ PIR ( $119 \mathrm{mg} /$ day). Potato/corn/other chips ( $93 \mathrm{mg} /$ day) are among the top five sources for persons with $131 \%-185 \%$ PIR; and fried white potatoes ( $92 \mathrm{mg} / \mathrm{day}$ ) are among the top five sources for persons $\geq 185 \%$ PIR.
- This approach identifies food sources of potassium for the population that may or may not be the richest sources of potassium. For that reason, these data may be most informative when potassium is over-consumed rather than under-consumed. If potassium is under-consumed, rich sources-foods with the greatest amount of potassium per 100 grams-may be more relevant.

See Appendix M for additional data.

## Sources of Calcium Among the U.S. Population, NHANES 2005-2006

- The top contributors of calcium for all persons are reduced-fat milk (12.2\%), regular cheese (9.2\%), whole milk (6.1\%), and pizza (6.1\%).
- This approach identifies food sources of a given dietary component for the population which may/may not be the richest sources of the component. For that reason, these data may be most informative when the component is over-, rather than under-consumed. If a component is under-consumed, rich sources-foods with the greatest amount per 100 grams-may be more relevant.

See Appendix $\mathbf{N}$ for additional data.

## Appendices

Appendix A: Sources of Food Group Intakes Among the U.S. Population, NHANES 2003-2004

## FIGURES

Figure 1. Distribution of intake (cup equivalents) between juice and whole fruit within the MyPyramid fruit group, U.S. children and adolescents (2-18 years)

## FOOD SOURCES OF JUICE

- 100\% fruit juice, not orange/grapefruit (44\%)
- $100 \%$ orange/grapefruit juice ( $41 \%$ )
- Fruit drinks (10\%)
- Other (5\%)

FOOD SOURCES OF WHOLE FRUIT

- Apples and pears (38\%)
- Bananas (16\%)
- Other fruit and fruit salads (8\%)
- Citrus fruits (8\%)
- Melon (8\%)
- Grapes (7\%)
- Other (15\%)

Fruit subgroups are Juice and Whole Fruit (fruit other than juice).
Data source: NHANES 2003-2004

## IDENTIFICATION OF TOP FOOD SOURCES OF VARIOUS DIETARY COMPONENTS

Figure 2. Distribution of intake (cup equivalents) among subgroups within the MyPyramid vegetable group, U.S. children and adolescents (2-18 years)

## FOOD SOURCES OF LEGUMES

- Beans (65\%)
- Mexican mixed dishes (20\%)
- Rice and rice mixed dishes (7\%)
- Chili (4\%)
- Soups (3\%)
- Other (1\%)

## FOOD SOURCES OF STARCHY VEGETABLES

- Fried white potatoes (33\%)
- Potato/corn/other chips (26\%)
- Other white potatoes (23\%)
- Corn (7\%)
- Soups (3\%)
- Beef and beef mixed dishes (3\%)
- Other (5\%)

## FOOD SOURCES OF DARK GREEN VEGETABLES

- Broccoli (43\%)
- Spinach (19\%)
- Lettuce (14\%)
- Soups (7\%)
- Chicken and chicken mixed dishes (6\%)
- Pasta and pasta dishes (5\%)
- Sour Cream (2\%)
- Other (5\%)

FOOD SOURCES OF
ORANGE VEGETABLES

- Carrots (62\%)
- Soups (10\%)
- Beef and beef mixed dishes (7\%)
- Chicken and chicken mixed dishes (5\%)
- Sweet potatoes (5\%)
- Vegetable medleys and other vegetables (5\%)
- Other (6\%)

## FOOD SOURCES OF OTHER VEGETABLES

- Pizza (18\%)
- Pasta and pasta dishes (15\%)
- Condiments (11\%)
- Lettuce (9\%)
- Tomatoes (5\%)
- Vegetable medleys and other vegetables (4\%)
- Burgers (4\%)
- Rice and rice mixed dishes (4\%)
- String Beans (4\%)
- Soups (4\%)
- Mexican mixed dishes (3\%)
- Chicken and chicken mixed dishes (3\%)
- Beef and beef mixed dishes (3\%)
- Tomato sauces (2\%)
- Other (10\%)

## IDENTIFICATION OF TOP FOOD SOURCES OF VARIOUS DIETARY COMPONENTS

## TABLES

Table 1. Distribution of servings among subgroups within MyPyramid major food groups, among U.S. children and adolescents (ages 2-18), NHANES ${ }^{\text {a }}$ 2003-2004

| Food Group | \% Current Intake | \% Recommended ${ }^{\text {b }}$ |
| :---: | :---: | :---: |
| Fruit |  |  |
| Whole fruit | 42.8 | $\geq 50$ |
| Juice | 57.2 | $\leq 50$ |
| Vegetables |  |  |
| Dark green ${ }^{\text {c }}$ | 3.0 | 17 |
| Orange ${ }^{\text {d }}$ | 3.3 | 11 |
| Legumes ${ }^{\text {e, f }}$ | 6.4 | 17 |
| Starchy ${ }^{\text {g }}$ | 36.3 | 17 |
| Other ${ }^{\text {h }}$ | 54.9 | 37 |
| Grains |  |  |
| Whole | 6.8 | $\geq 50$ |
| Non-whole | 93.2 | $\leq 50$ |
| Meat and Beans |  |  |
| Meat | 45.4 | $N A^{i}$ |
| Poultry | 30.0 | $N A^{i}$ |
| Fish | 4.6 | $N A^{i}$ |
| Egg | 6.1 | $N A^{i}$ |
| Nuts/seeds | 9.8 | $N A^{i}$ |
| Legumes ${ }^{\text {e }}$ | 3.3 | NA |
| Soy | 0.9 | $N A^{i}$ |
| Milk |  |  |
| Milk | 64.5 | NA |
| Yogurt | 1.7 | $N A^{i}$ |
| Cheese | 33.4 | $N A^{i}$ |
| Discretionary Calories |  |  |
| Solid fat | 52.7 | $N A^{i}$ |
| Added sugars | 46.7 | $N A^{i}$ |
| Alcohol | 0.6 | $N A^{i}$ |

a: NHANES = National Health and Nutrition Examination Survey.
b: From the 2005 Dietary Guidelines for Americans.
c: For example, broccoli, romaine, spinach, and collard greens.
d: For example, carrots, pumpkin, and sweet potatoes.
e: For example, lentils, cooked dried peas, and beans.
f: Legumes are included in both the vegetable group and the meat and beans group so that the relative proportion can be determined within both food groups. In the meat and beans group, servings are adjusted as defined in the MyPyramid Equivalents Database so that $1 / 4$ cup vegetables $=1$ ounce equivalent meat and beans.
g: For example, white potatoes, corn, and green peas.
h: For example, tomatoes, onions, and iceberg lettuce.
i: NA = Not applicable. No specific recommendations provided.
Table 2. Food sources of whole fruit, fruit juice, dark green vegetables, orange vegetables, legumes, starchy vegetables, other vegetables, whole grains, non-whole grains, meat, poultry, fish, eggs, soy, nuts and seeds, milk, cheese, oils, solid fats, and added sugars, among U.S. children and adolescents (ages 2-18), NHANES ${ }^{\text {a }}$ 2003-2004

Whole Fruit ${ }^{\text {b }}$

| Ranking | Food Item | $\%$ | Cumulative \% |
| :---: | :--- | :---: | :---: |
| 1 | Apples and pears | 37.5 | 37.5 |
| 2 | Bananas | 15.7 | 53.3 |
| 3 | Other fruit and fruit salad | 8.4 | 61.7 |
| 4 | Citrus fruits | 8.3 | 70.0 |
| 5 | Melon | 7.8 | 77.7 |
| 6 | Grapes | 7.3 | 85.1 |
| 7 | Strawberries | 3.8 | 88.9 |
| 8 | Peaches/plums/apricots/nectarines | 3.4 | 92.3 |
| 9 | Grain-based desserts | 2.0 | 94.3 |

a: NHANES = National Health and Nutrition Examination Survey.
b: Specific food contributing at least $1 \%$ of whole fruit: dairy desserts.

Fruit Juice ${ }^{\text {c }}$

| Ranking | Food Item | \% | Cumulative \% |
| :---: | :--- | :---: | :---: |
| 1 | 100\% fruit juice, not orange/grapefruit | 43.7 | 43.7 |
| 2 | $100 \%$ orange/grapefruit juice | 41.2 | 84.9 |
| 3 | Fruit drinks | 10.4 | 95.3 |

c: Specific foods contributing at least $1 \%$ of fruit juice in descending order: dairy desserts, candy.
Dark Green Vegetables ${ }^{\text {d }}$

| Ranking | Food Item | \% | Cumulative \% |
| :---: | :--- | :---: | :---: |
| 1 | Broccoli | 42.8 | 42.8 |
| 2 | Spinach | 18.7 | 61.5 |
| 3 | Lettuce | 14.1 | 75.6 |
| 4 | Soups | 7.1 | 82.7 |
| 5 | Chicken and chicken mixed dishes | 5.7 | 88.3 |
| 6 | Pasta and pasta dishes | 4.6 | 92.9 |
| 7 | Sour cream | 2.2 | 95.1 |

d: Specific foods contributing at least 1\% to dark green vegetables in descending order: beef and beef mixed dishes; vegetable medleys and other vegetables.

Orange Vegetables ${ }^{\text {e }}$

| Ranking | Food Item | $\%$ | Cumulative \% |
| :---: | :--- | :---: | :---: |
| 1 | Carrots | 62.3 | 62.3 |
| 2 | Soups | 10.1 | 72.5 |
| 3 | Beef and beef mixed dishes | 6.7 | 79.2 |
| 4 | Chicken and chicken mixed dishes | 5.2 | 84.4 |
| 5 | Sweet potatoes | 4.9 | 89.3 |
| 6 | Vegetable medleys and other vegetables | 4.6 | 93.8 |

[^0]Legumes ${ }^{\boldsymbol{f}}$

| Ranking | Food Item | $\%$ | Cumulative \% |

## TABLES

Table 4. Distribution of intake (calories) across beverage types, U.S. children and adolescents (2-18 years), NHANES 2005-2006

| Rank | Food Group | \% | Cumulative \% | Mean (kcal) |
| :---: | :--- | :---: | :---: | :---: |
| 1 | Soda, regular | 29.3 | 29.3 | 117 |
| 2 | Reduced-fat milk | 21.4 | 50.7 | 86 |
| 3 | Whole milk | 14.9 | 65.6 | 60 |
| 4 | Fruit drink, regular | 13.5 | 79.2 | 54 |
| 5 | $100 \%$ fruit juice, not orange/grapefruit | 8.8 | 88.0 | 35 |
| 6 | $100 \%$ orange/grapefruit juice | 4.5 | 92.5 | 18 |
| 7 | Skim milk | 3.2 | 95.7 | 13 |
| 8 | Tea | 1.8 | 97.5 | 7 |
| 9 | Alcoholic beverages | 1.4 | 98.9 | 6 |
| 10 | Milk substitutes and evaporated milk | 0.4 | 99.3 | 2 |
| 11 | Coffee | 0.3 | 99.6 | 1 |
| 12 | Fruit drink, low-calorie | 0.2 | 99.8 | 1 |
| 13 | Soda, low-calorie | 0.2 | 100.0 | 1 |
| 14 | Vegetable juice | 0.0 | 100.0 | 1 |
|  |  |  |  | 1 |

Table 5. Distribution of intake (calories) across beverage types, U.S. adults (19+ years), NHANES 2005-2006

| Rank | Food Group | $\%$ | Cumulative \% | Mean (kcal) |
| :---: | :--- | :---: | :---: | :---: |
| 1 | Soda, regular | 27.7 | 27.7 | 109 |
| 2 | Alcoholic beverages | 26.9 | 54.6 | 106 |
| 3 | Reduced-fat milk | 10.0 | 64.6 | 39 |
| 4 | Fruit drink, regular | 7.2 | 71.8 | 28 |
| 5 | Whole milk | 6.3 | 78.1 | 25 |
| 6 | $100 \%$ orange/grapefruit juice | 5.7 | 83.8 | 23 |
| 7 | Tea | 4.1 | 87.9 | 16 |
| 8 | Skim milk | 3.8 | 91.7 | 15 |
| 9 | $100 \%$ fruit juice, not orange/grapefruit | 3.6 | 95.3 | 14 |
| 10 | Coffee | 2.5 | 97.7 | 10 |
| 11 | Milk substitute and evaporated milk | 0.9 | 98.6 | 4 |
|  |  |  |  | 10 |

IDENTIFICATION OF TOP FOOD SOURCES OF VARIOUS DIETARY COMPONENTS

| Rank | Food Group | \% | Cumulative \% | Mean (kcal) |
| :---: | :--- | :---: | :---: | :---: |
| 12 | Soda, low-calorie | 0.8 | 99.4 | 3 |
| 13 | Vegetable juice | 0.3 | 99.7 | 1 |
| 14 | Fruit drink, low-calorie | 0.3 | 100.0 | 1 |

Appendix C: Sources of Saturated Fat, Stearic Acid, and Cholesterol-Raising Fat Among the U.S. Population, NHANES 2005-2006

## TABLES

Table 6. Top food sources of saturated fat ${ }^{\text {a }}$ among U.S. population, NHANES ${ }^{\text {b }}$ 2005-2006

| Rank | Food Item | Contribution to Intake (\%) | Cumulative Contribution (\%) |
| :---: | :---: | :---: | :---: |
| 1 | Regular cheese | 8.5 | 8.5 |
| 2 | Pizza | 5.9 | 14.4 |
| 3 | Grain-based desserts | 5.8 | 20.2 |
| 4 | Dairy desserts | 5.6 | 25.8 |
| 5 | Chicken and chicken mixed dishes | 5.5 | 31.2 |
| 6 | Sausage, franks, bacon, and ribs | 4.9 | 36.2 |
| 7 | Burgers | 4.4 | 40.5 |
| 8 | Mexican mixed dishes | 4.1 | 44.6 |
| 9 | Beef and beef mixed dishes | 4.1 | 48.7 |
| 10 | Reduced-fat milk | 3.9 | 52.6 |
| 11 | Pasta and pasta dishes | 3.7 | 56.3 |
| 12 | Whole milk | 3.4 | 59.7 |
| 13 | Eggs and egg mixed dishes | 3.2 | 62.9 |
| 14 | Candy | 3.1 | 66.0 |
| 15 | Butter | 2.9 | 68.9 |
| 16 | Potato/corn/other chips | 2.4 | 71.3 |
| 17 | Nuts/seeds and nut/seed mixed dishes | 2.1 | 73.4 |
| 18 | Fried white potatoes | 2.0 | 75.4 |

a: Specific foods contributing at least $1 \%$ of saturated fat in descending order: cold cuts, yeast breads, salad dressing, pork and pork mixed dishes, soups, other white potatoes, reduced-fat cheese, cream, quick breads. b: NHANES = National Health and Nutrition Examination Survey.

Table 7. Top food sources of stearic acid ${ }^{\text {a }}$ among U.S. population, NHANES ${ }^{\text {b }}$ 2005-2006

| Rank | Food Item | Contribution to Intake (\%) | Cumulative Contribution (\%) |
| :---: | :---: | :---: | :---: |
| 1 | Grain-based desserts | 8.3 | 8.3 |
| 2 | Regular cheese | 6.1 | 14.4 |
| 3 | Sausage, franks, bacon, and ribs | 6.0 | 20.4 |
| 4 | Chicken and chicken mixed dishes | 5.7 | 26.1 |
| 5 | Pizza | 5.7 | 31.8 |
| 6 | Burgers | 5.1 | 36.9 |
| 7 | Beef and beef mixed dishes | 4.8 | 41.7 |
| 8 | Mexican mixed dishes | 4.4 | 46.1 |
| 9 | Dairy desserts | 4.3 | 50.4 |
| 10 | Candy | 4.2 | 54.5 |
| 11 | Pasta and pasta dishes | 3.3 | 57.8 |
| 12 | Fried white potatoes | 3.2 | 61.1 |
| 13 | Eggs and egg mixed dishes | 3.2 | 64.2 |
| 14 | Reduced-fat milk | 3.0 | 67.2 |
| 15 | Whole milk | 2.6 | 69.9 |
| 16 | Yeast breads | 2.5 | 72.3 |
| 17 | Cold cuts | 2.2 | 74.5 |
| 18 | Butter | 2.2 | 76.7 |

a: Specific foods contributing at least $1 \%$ of stearic acid in descending order: nuts/seeds and nut/seed mixed dishes, pork and pork mixed dishes, potato/corn/other chips, quick breads, salad dressing, soups, crackers, other white potatoes.
b: NHANES $=$ National Health and Nutrition Examination Survey.

Table 8. Top food sources of cholesterol raising fat ${ }^{\text {a }}$ among U.S. population, NHANES ${ }^{\text {b }}$ 2005-2006

| Rank | Food ltem | Contribution to Intake (\%) | Cumulative Contribution (\%) |
| :---: | :--- | :---: | :---: |
| 1 | Regular cheese | 9.3 | 9.3 |
| 2 | Dairy desserts | 6.0 | 15.4 |
| 3 | Pizza | 6.0 | 21.3 |
| 4 | Chicken and chicken mixed <br> dishes | 5.4 | 26.7 |
| 5 | Grain-based desserts | 4.9 | 31.6 |
| 6 | Sausage, franks, bacon, and <br> ribs | 4.6 | 36.2 |
| 7 | Reduced-fat milk | 4.2 | 40.4 |
| 8 | Burgers | 4.1 | 44.6 |
| 9 | Mexican mixed dishes | 4.0 | 48.6 |
| 10 | Pasta and pasta dishes | 3.8 | 52.4 |
| 11 | Beef and beef mixed dishes | 3.8 | 56.2 |
| 12 | Whole milk | 3.7 | 59.9 |
| 13 | Eggs and egg mixed dishes | 3.2 | 63.1 |
| 14 | Butter | 3.1 | 66.2 |
| 15 | Potato/corn/other chips | 2.8 | 69.0 |
| 16 | Candy | 2.7 | 71.7 |
| 17 | Nuts/seeds and nut/seed mixed <br> dishes | 2.2 | 73.9 |
|  |  |  | 4 |

a: Saturated fat minus stearic acid.
b: NHANES = National Health and Nutrition Examination Survey.
Specific foods contributing at least $1 \%$ of Cholesterol Raising fat in descending order: cold cuts, yeast breads, fried white potatoes, salad dressing, soups, cream, reduced-fat cheese, other white potatoes, pork and pork mixed dishes.

## Appendix D: Sources of Selected Fatty Acids Among the U.S. Population, NHANES 2005-2006

## TABLES

Table 9. Food sources of oleic acid (MFA 18:1), listed in descending order by percentage of their contribution to intake, based on data from NHANES 2005-2006

| Rank | Food Item | Contribution to Intake (\%) | Cumulative Contribution (\%) |
| :---: | :---: | :---: | :---: |
| 1 | Grain-based desserts | 8.9 | 8.9 |
| 2 | Chicken and chicken mixed dishes | 7.6 | 16.6 |
| 3 | Sausage, franks, bacon, and ribs | 5.9 | 22.5 |
| 4 | Nuts/seeds and nut/seed mixed dishes | 5.5 | 27.9 |
| 5 | Pizza | 5.4 | 33.3 |
| 6 | Fried white potatoes | 4.9 | 38.2 |
| 7 | Mexican mixed dishes | 4.6 | 42.8 |
| 8 | Burgers | 4.1 | 46.9 |
| 9 | Beef and beef mixed dishes | 3.9 | 50.8 |
| 10 | Eggs and egg mixed dishes | 3.5 | 54.3 |
| 11 | Regular cheese | 3.3 | 57.5 |
| 12 | Potato/corn/other chips | 3.2 | 60.7 |
| 13 | Pasta and pasta dishes | 3.1 | 63.8 |
| 14 | Salad dressing | 2.6 | 66.4 |
| 15 | Dairy desserts | 2.3 | 68.7 |
| 16 | Yeast breads | 2.2 | 70.9 |

Specific foods contributing at least $1 \%$ of oleic acid (MFA 18:1, octadecenoic acid) in descending order: cold cuts, quick breads, crackers, candy, reduced-fat milk, pork and pork mixed dishes, whole milk, other fish and fish mixed dishes, margarine, soups, butter.

Table 10. Food sources of total omega 6 fatty acids (18:2 + 20:4), listed in descending order by percentage of their contribution to intake, based on data from NHANES 2005-2006

| Rank | Food item | Contribution to Intake (\%) | Cumulative Contribution (\%) |
| :---: | :---: | :---: | :---: |
| 1 | Chicken and chicken mixed dishes | 9.5 | 9.5 |
| 2 | Grain-based desserts | 7.4 | 16.9 |
| 3 | Salad dressing | 7.3 | 24.3 |
| 4 | Potato/corn/other chips | 6.9 | 31.2 |
| 5 | Nuts/seeds and nut/seed mixed dishes | 6.4 | 37.6 |
| 6 | Pizza | 5.3 | 42.9 |
| 7 | Yeast breads | 4.5 | 47.4 |
| 8 | Fried white potatoes | 3.5 | 50.9 |
| 9 | Pasta and pasta dishes | 3.5 | 54.4 |
| 10 | Mexican mixed dishes | 3.3 | 57.7 |
| 11 | Mayonnaise | 3.1 | 60.8 |
| 12 | Quick breads | 3.0 | 63.8 |
| 13 | Eggs and egg mixed dishes | 2.9 | 66.7 |
| 14 | Popcorn | 2.6 | 69.2 |
| 15 | Sausage, franks, bacon, and ribs | 2.1 | 71.4 |

Specific foods contributing at least $1 \%$ of omega 6 fatty acids in descending order: other fish and fish mixed dishes, margarine, burgers, beef and beef mixed dishes, rice and rice mixed dishes, crackers, other white potatoes, beans, candy.

Table 11. Food sources of linoleic acid (PFA 18:2), listed in descending order by percentage of their contribution to intake, based on data from NHANES 2005-2006

| Rank | Food Item | Contribution to Intake (\%) | Cumulative Contribution (\%) |
| :---: | :--- | :---: | :---: |
| 1 | Chicken and chicken mixed <br> dishes | 9.3 | 9.3 |
| 2 | Grain-based desserts | 7.5 | 16.8 |
| 3 | Salad dressing | 7.4 | 24.2 |
| 4 | Potato/corn/other chips | 6.9 | 31.2 |
| 5 | Nuts/seeds and nut/seed mixed <br> dishes | 6.5 | 37.7 |
| 6 | Pizza | 5.3 | 43.0 |
| 7 | Yeast breads | 4.5 | 47.5 |

| Rank | Food Item | Contribution to Intake (\%) | Cumulative Contribution (\%) |
| :---: | :--- | :---: | :---: |
| 8 | Fried white potatoes | 3.5 | 51.0 |
| 9 | Pasta and pasta dishes | 3.5 | 54.6 |
| 10 | Mexican mixed dishes | 3.3 | 57.9 |
| 11 | Mayonnaise | 3.1 | 61.0 |
| 12 | Quick breads | 3.0 | 64.0 |
| 13 | Eggs and egg mixed dishes | 2.8 | 66.8 |
| 14 | Popcorn | 2.6 | 69.4 |
| 15 | Sausage, franks, bacon, and <br> ribs | 2.1 | 71.5 |

Specific foods contributing at least 1\% of linoleic acid (PFA 18:2, octadecadienoic acid) in descending order: other fish and fish mixed dishes, margarine, burgers, crackers, rice and rice mixed dishes, beef and beef mixed dishes, other white potatoes, beans, candy.

Table 12. Food sources of arachidonic acid (PFA 20:4), listed in descending order by percentages of their contribution to intake, based on data from NHANES 2005-2006

| Rank | Food Item | Contribution to Intake (\%) | Cumulative Contribution (\%) |
| :---: | :---: | :---: | :---: |
| 1 | Chicken and chicken mixed dishes | 26.9 | 26.9 |
| 2 | Eggs and egg mixed dishes | 17.8 | 44.7 |
| 3 | Beef and beef mixed dishes | 7.3 | 52.0 |
| 4 | Sausage, franks, bacon, and ribs | 6.7 | 58.7 |
| 5 | Other fish and fish mixed dishes | 5.8 | 64.5 |
| 6 | Burgers | 4.6 | 69.1 |
| 7 | Cold cuts | 3.3 | 72.4 |
| 8 | Pork and pork mixed dishes | 3.1 | 75.5 |
| 9 | Mexican mixed dishes | 3.1 | 78.7 |
| 10 | Pizza | 2.8 | 81.5 |
| 11 | Turkey and turkey mixed dishes | 2.7 | 84.2 |
| 12 | Pasta and pasta dishes | 2.3 | 86.5 |
| 13 | Grain-based desserts | 2.0 | 88.5 |

Specific foods contributing at least 1\% of arachidonic acid (PFA 20:4, eicosatetraeneoic acid) in descending order: shrimp and soups, regular cheese.

Table 13. Food sources of total omega 3 fatty acids (18:3+20:5+22:6), listed in descending order by percentage of their contribution to intake, based on data from NHANES 2005-2006

| Rank | Food Item | Contribution to Intake (\%) | Cumulative Contribution (\%) |
| :---: | :---: | :---: | :---: |
| 1 | Salad dressing | 9.8 | 9.8 |
| 2 | Chicken and chicken mixed dishes | 6.9 | 16.7 |
| 3 | Grain-based desserts | 5.7 | 22.5 |
| 4 | Other fish and fish mixed dishes | 5.7 | 28.2 |
| 5 | Pizza | 5.4 | 33.5 |
| 6 | Yeast breads | 4.7 | 38.2 |
| 7 | Mayonnaise | 3.7 | 42.0 |
| 8 | Pasta and pasta dishes | 3.3 | 45.3 |
| 9 | Quick breads | 3.2 | 48.5 |
| 10 | Fried white potatoes | 2.6 | 51.1 |
| 11 | Mexican mixed dishes | 2.6 | 53.7 |
| 12 | Nuts/seeds and nut/seed mixed dishes | 2.5 | 56.2 |
| 13 | Burgers | 2.4 | 58.6 |
| 14 | Eggs and egg mixed dishes | 2.4 | 61.0 |
| 15 | Margarine | 2.4 | 63.4 |
| 16 | Regular cheese | 2.4 | 65.8 |
| 17 | Dairy desserts | 2.1 | 67.9 |
| 18 | Whole milk | 2.0 | 69.9 |

Specific foods contributing at least $1 \%$ of total omega 3 fatty acids in descending order: sausage, franks, bacon, and ribs, other white potatoes, beef and beef mixed dishes, beans, potato/corn/other chips, tuna and tuna mixed dishes, shrimp and shrimp mixed dishes, coleslaw, rice and rice mixed dishes, popcorn, vegetable mixtures.

Table 14. Food sources of alpha-linolenic acid (PFA 18:3), listed in descending order by percentage of their contribution to intake, based on data from NHANES 2005-2006

| Rank | Food Item | Contribution to Intake (\%) | Cumulative Contribution (\%) |
| :---: | :--- | :---: | :---: |
| 1 | Salad dressing | 10.5 | 10.5 |
| 2 | Chicken and chicken mixed <br> dishes | 6.4 | 17.0 |
| 3 | Grain-based desserts | 6.1 | 23.1 |

| Rank | Food Item | Contribution to Intake (\%) | Cumulative Contribution (\%) |
| :---: | :--- | :---: | :---: |
| 4 | Pizza | 5.8 | 28.9 |
| 5 | Yeast breads | 5.0 | 33.9 |
| 6 | Mayonnaise | 4.0 | 37.9 |
| 7 | Pasta and pasta dishes | 3.5 | 41.4 |
| 8 | Quick breads | 3.4 | 44.9 |
| 9 | Fried white potatoes | 2.8 | 47.7 |
| 10 | Mexican mixed dishes | 2.7 | 50.4 |
| 11 | Nuts/seeds and nut/seed mixed <br> dishes | 2.7 | 53.1 |
| 12 | Burgers | 2.6 | 55.7 |
| 13 | Margarine | 2.6 | 58.3 |
| 14 | Regular cheese | 2.6 | 60.8 |
| 15 | Dairy desserts | 2.2 | 63.1 |
| 16 | Whole milk | 2.2 | 65.3 |
| 17 | Eggs and egg mixed dishes | 2.2 | 67.4 |
| 18 | Other fish and fish mixed dishes | 2.0 | 69.4 |

Specific foods contributing at least 1\% of alpha-linolenic acid (PFA 18:3, octadecatrienoic acid) in descending order: sausage, franks, bacon, and ribs, other white potatoes, beef and beef mixed dishes, beans, potato/corn/other chips, coleslaw, rice and rice mixed dishes, tuna and tuna mixed dishes, popcorn, vegetable mixtures.

Table 15. Food sources of EPA and DHA (20:5+22:6), listed in descending order by percentage of their contribution to intake, based on data from NHANES 2005-2006

| Rank | Food Item | Contribution to Intake (\%) | Cumulative Contribution (\%) |
| :---: | :--- | :---: | :---: |
| 1 | Other fish and fish mixed dishes | 53.1 | 53.1 |
| 2 | Chicken and chicken mixed <br> dishes | 13.8 | 66.9 |
| 3 | Shrimp and shrimp mixed <br> dishes | 12.9 | 79.8 |
| 4 | Eggs and egg mixed dishes | 5.8 | 85.6 |
| 5 | Tuna and tuna mixed dishes | 5.3 | 91.0 |

Specific foods contributing at least 1\% of EPA and DHA: soups, Mexican mixed dishes.

Appendix E: Sources of Cholesterol Among the U.S. Population, NHANES 20052006

Table 16. Top food sources of cholesterol among U.S. population, NHANES ${ }^{\text {b }}$ 2005-2006

| Rank | Food Item | \% | Cumulative \% |
| :---: | :---: | :---: | :---: |
| 1 | Eggs and egg mixed dishes | 24.6 | 24.6 |
| 2 | Chicken and chicken mixed dishes | 12.5 | 37.1 |
| 3 | Beef and beef mixed dishes | 6.4 | 43.6 |
| 4 | Burgers | 4.6 | 48.2 |
| 5 | Regular cheese | 4.2 | 52.4 |
| 6 | Sausage, franks, bacon, and ribs | 3.9 | 56.3 |
| 7 | Other fish and fish mixed dishes | 3.4 | 59.7 |
| 8 | Grain-based desserts | 3.3 | 63.0 |
| 9 | Dairy desserts | 3.2 | 66.3 |
| 10 | Pasta and pasta dishes | 3.1 | 69.3 |
| 11 | Pizza | 2.9 | 72.2 |
| 12 | Mexican mixed dishes | 2.9 | 75.1 |
| 13 | Cold cuts | 2.7 | 77.8 |
| 14 | Reduced-fat milk | 2.5 | 80.3 |
| 15 | Pork and pork mixed dishes | 2.3 | 82.6 |
| 16 | Shrimp and shrimp mixed dishes | 2.0 | 84.6 |

a: Specific foods contributing at least $1 \%$ of cholesterol in descending order: whole milk, butter, soups, quick breads, pancakes/waffles/French toast.
b: NHANES = National Health and Nutrition Examination Survey.

## Appendix F: Sources of Protein Among U.S. Children and Adolescents, NHANES 2005-2006

## TABLES

Table 17a. Mean intake of protein and percentage contribution of various foods among U.S. children and adolescents, by age, NHANES 2005-2006

|  |  | All Persons, 2-18 Years | Age Group (years) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\begin{gathered} \text { 2-3 } \\ \text { Years } \end{gathered}$ | 4-8 | 9-13 | 14-18 |
| Sample | Size |  | 3,778 | 497 | 899 | 1,047 | 1,335 |
| Mean In | take of Protein (gm) | 70 | 52 | 60 | 71 | 86 |
| Rank ${ }^{\text {a }}$ | Food Group ${ }^{\text {b,c }}$ | \% |  |  |  |  |
| 1 | Chicken and chicken mixed dishes | 12.9 | 9.1 | 11.5 | 13.6 | 14.0 |
| 2 | Pizza | 8.0 | 3.9 | 6.6 | 7.6 | 10.0 |
| 3 | Reduced-fat milk | 7.8 | 11.0 | 9.6 | 8.4 | 5.4 |
| 4 | Beef and beef mixed dishes | 5.5 | 3.4 | 3.5 | 5.0 | 7.6 |

Appendix H: Sources of Fiber Among U.S. Children and Adolescents, NHANES 2005-2006

FIGURE
Figure 9. Distribution of fiber intake (grams) across food sources, U.S. children and adolescents (2-18 years)

| Food | Percentage Contribution |
| :--- | :---: |
| Other | $35 \%$ |
| Yeast breads | $8 \%$ |
| Mexican mixed dishes | $7 \%$ |
| Pasta and pasta dishes | $7 \%$ |
| Pizza | $6 \%$ |
| Ready-to-eat-cereals | $6 \%$ |
| Grain-based desserts | $5 \%$ |
| Fried white potatoes | $5 \%$ |
| Potato/corn/other chips | $5 \%$ |
| Apples and pears | $4 \%$ |
| Beans | $3 \%$ |
| Chicken and chicken mixed dishes | $3 \%$ |
| Nuts/seeds and nut/seed mixed dishes | $2 \%$ |
| Bananas | $2 \%$ |
| Dairy desserts | $2 \%$ |
| The |  |

The "Other" category includes many specific foods that each contribute less than $2 \%$ of dietary fiber. Data source: NHANES 2005-06

## TABLES

Table 25a. Mean intake of dietary fiber and percentage contribution of various foods among U.S. children and adolescents, by age, NHANES 2005-2006

|  |  | All Persons, 2-18 Years | Age Group (years) |  |  |  |

| 14 | Beef and beef mixed dishes | 8.2 | 6.6 | 15.0 | 8.9 | 8.4 | 7.1 | 8.1 |
| 15 | Crackers | 7.7 | 9.1 | 6.2 | 4.0 | 5.8 | 7.8 | 8.5 |
| 17 | Soups | 6.3 | 5.2 | 6.1 | 11.1 | 7.6 | 4.2 | 6.1 |

a: Rank for all persons 2-18 years only. Columns are ordered by this ranking. The top five food groups for each sub-group are bolded.
b: Specific foods contributing at least $2 \%$ of solid fats for all persons in descending order are listed. Specific foods contributing at least $2 \%$ of solid fats for any given subgroup are then also listed in italics.
c: Specific foods contributing at least $1 \%$ of solid fats for all persons in descending order: beef and beef mixed dishes, crackers, butter, soups, pancakes/waffles/French toast, yeast breads, candy.

## Appendix K: Sources of Calories From Added Sugars Among the U.S. Population, NHANES 2005-2006

## TABLES

## Children and Adolescents

Table 39a. Mean intake of added sugar and percentage contribution (kcal) of various foods among U.S. children and adolescents, by age, NHANES 2003-2004

|  |  | All Persons, 2-18 years | Age Group (years) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 2-3 years | 4-8 | 9-13 | 14-18 |
|  | Sample Size |  | 3,553 | 424 | 781 | 1,001 | 1,347 |
| Mean Intake of Added Sugar (kcal) |  | 365 | 197 | 329 | 381 | 444 |
| Rank ${ }^{\text {a }}$ | Food Group ${ }^{\text {b,c }}$ |  |  |  |  |  |
| 1 | Soda/energy/sports drinks | 31.8 | 11.4 | 19.9 | 30.7 | 44.5 |
| 2 | Fruit drinks | 15.0 | 19.3 | 17.0 | 13.6 | 14.1 |
| 3 | Grain-based desserts | 10.9 | 11.3 | 11.2 | 12.4 | 9.4 |
| 4 | Dairy desserts | 7.9 | 7.6 | 10.4 | 8.8 | 5.5 |
| 5 | Candy | 6.8 | 8.5 | 7.0 | 7.8 | 5.6 |
| 6 | Ready-to-eat cereals | 6.4 | 8.3 | 8.3 | 6.4 | 4.9 |
| 7 | Syrups/toppings | 2.8 | 6.1 | 3.6 | 3.0 | 1.7 |
| 8 | Tea | 2.1 | 3.2 | 2.0 | 1.7 | 2.3 |
| 9 | Yeast breads | 1.9 | 1.9 | 1.7 | 2.2 | 1.8 |
| 10 | Whole milk | 1.7 | 3.2 | 2.7 | 1.9 | 0.6 |
| 12 | Reduced-fat milk | 1.3 | 1.3 | 2.4 | 1.1 | 0.8 |
| 13 | Yogurt | 1.2 | 4.0 | 2.5 | 0.4 | 0.5 |

a: Rank for persons 2-18 years old only. Columns for other age groups are ordered by this ranking. The top five food groups for each age group are bolded.
b: Specific foods contributing at least $2 \%$ of added sugar for all persons $2-18$ years old in descending order are listed. Specific foods contributing at least $2 \%$ of added sugar for any given subgroup are then also listed in italics. c: Specific foods contributing at least 1\% of added sugar for all persons 2-18 years old in descending order: yeast breads, whole milk, sugars/honey, reduced-fat milk, yogurt, jams and jellies.

## IDENTIFICATION OF TOP FOOD SOURCES OF VARIOUS DIETARY COMPONENTS

Table 39b. Mean intake of added sugar and mean contribution (kcal) of various foods among U.S. children and adolescents, by age, NHANES 2003-2004

|  |  | All Persons, 2-18 years | Age Group (years) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 2-3 years | 4-8 | 9-13 | 14-18 |
|  | Sample Size |  | 3,553 | 424 | 781 | 1,001 | 1,347 |
| Mean Intake of Added Sugar (kcal) |  | 365 | 197 | 329 | 381 | 444 |
| Rank ${ }^{\text {a }}$ | Food Groupb,c |  |  |  |  |  |
| 1 | Soda/energy/sports drinks | 116.4 | 22.4 | 65.4 | 116.8 | 197.4 |
| 2 | Fruit drinks | 54.8 | 38.1 | 55.8 | 51.8 | 62.7 |
| 3 | Grain-based desserts | 39.8 | 22.3 | 36.7 | 47.1 | 41.5 |
| 4 | Dairy desserts | 29.0 | 14.9 | 34.3 | 33.5 | 24.3 |
| 5 | Candy | 24.9 | 16.7 | 23.0 | 29.6 | 24.8 |
| 6 | Ready-to-eat cereals | 23.6 | 16.4 | 27.2 | 24.4 | 21.8 |

## Appendix N: Sources of Calcium Among the U.S. Population, NHANES 20052006 <br> TABLES

There are separate tables for the percentage and cumulative contribution of various foods.
Table 55. Top food sources of calcium ${ }^{\text {a }}$ among U.S. population (ages 2+), NHANES ${ }^{\text {b }}$ 2005-2006

| Ranking | Food item | $\%$ | Cumulative \% |
| :---: | :--- | :---: | :---: |
| 1 | Reduced-fat milk | 12.2 | 12.2 |
| 2 | Regular cheese | 9.2 | 21.4 |
| 3 | Whole milk | 6.1 | 27.5 |
| 4 | Pizza | 6.1 | 33.6 |
| 5 | Miscellaneous ${ }^{\text {c }}$ | 5.7 | 39.3 |
| 6 | Skim milk | 5.4 | 44.7 |
| 7 | Dairy desserts | 4.5 | 49.2 |
| 10 | Mexican mixed dishes | 4.0 | 53.2 |
| 11 | Pasta and pasta dishes | 3.8 | 57.0 |
| 12 | 100\% orange/grapefruit juice | 2.0 | 60.0 |
| 13 | Ready-to-eat cereals | 2.2 | 62.5 |
| 14 | Grain-based desserts | 2.1 | 64.8 |
|  | Reduced-fat cheese | 2.0 | 66.9 |

a: Specific foods contributing at least $1 \%$ of calcium in descending order: eggs/egg mixed dishes, yogurt, chicken/chicken mixed dishes, meal replacements, burgers, coffee, pancakes/waffles/French toast, soda/energy/sports drinks, fruit drinks, potato/corn/other chips, and beef/beef mixed dishes.
b: NHANES = National Health and Nutrition Examination Survey.
c: The miscellaneous category includes items such as sugar substitutes, unreconstituted cocoa powder, powdered butter replacement, and cornstarch.

Table 56. Top food sources of calcium ${ }^{\text {a }}$ among U.S. children and adolescents (ages 2-18), NHANES ${ }^{\text {b }}$ 20052006

| Ranking |  | Food item | $\%$ |
| :---: | :--- | :---: | :---: |
| 1 | Reduced-fat milk | Whole milk | 19.5 |
| 2 | Pizza | 10.3 | Cumulative \% |
| 3 | Regular cheese | 8.3 | 19.5 |
| 4 | Yeast breads | 7.6 | 39.9 |
| 5 | Dairy desserts | 4.8 | 45.2 |
| 6 | Skim milk | 4.5 | 50.6 |
| 7 |  |  | 5.6 |

## IDENTIFICATION OF TOP FOOD SOURCES OF VARIOUS DIETARY COMPONENTS

| Ranking | Food item | $\%$ | Cumulative \% |
| :---: | :--- | :---: | :---: |
| 8 | Pasta and pasta dishes | 3.3 | 62.0 |
| 9 | Miscellaneous $^{\text {c }}$ | 3.2 | 65.2 |
| 10 | Mexican mixed dishes | 2.8 | 68.0 |
| 11 | Ready-to-eat cereals | 2.7 | 70.7 |
| 12 | Reduced fat cheese | 2.2 | 72.9 |
| 13 | 100\% orange/grapefruit juice | 2.1 | 75.0 |

a: Specific foods contributing at least $1 \%$ of calcium in children and adolescents in descending order: pancakes/waffles/French toast, grain-based desserts, yogurt, fruit drinks, burgers, chicken/chicken mixed dishes, eggs/egg mixed dishes, and potato/corn/other chips.
b: NHANES = National Health and Nutrition Examination Survey.
c: The miscellaneous category includes items such as sugar substitutes, unreconstituted cocoa powder, powdered butter replacement, and cornstarch.

Table 57. Top food sources of calcium ${ }^{\text {a }}$ among U.S. adults (ages 19+), NHANES ${ }^{\text {b }}$ 2005-2006

| Ranking | Food item | $\%$ | Cumulative \% |
| :---: | :--- | :---: | :---: |
| 1 | Reduced-fat milk | 9.8 | 9.8 |
| 2 | Regular cheese | 9.7 | 19.5 |
| 3 | Miscellaneous ${ }^{\text {c }}$ | 6.5 | 26.0 |
| 4 | Yeast breads | 5.6 | 31.6 |
| 5 | Pizza | 5.3 | 36.9 |
| 6 | Skim milk | 4.9 | 41.8 |
| 7 | Whole milk | 4.7 | 46.5 |
| 8 | Mexican mixed dishes | 4.1 | 50.6 |
| 9 | Dairy desserts | 3.8 | 54.4 |
| 10 | Pasta and pasta dishes | 2.9 | 57.3 |
| 11 | 100\% orange/grapefruit juice | 2.7 | 60.0 |
| 12 | Grain-based desserts | 2.2 | 62.2 |
| 13 | Eggs and egg mixed dishes | 2.1 | 64.3 |
| 14 | Ready-to-eat cereals | 2.1 | 66.4 |
| 15 | Reduced-fat cheese | 2.0 | 68.4 |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

a: Specific foods contributing at least $1 \%$ of Calcium in adults in descending order: yogurt, meal replacements, chicken/chicken mixed dishes, coffee, burgers, soda/energy/sports drinks, beef/beef mixed dishes, soups, quick breads, other fish/fish mixed dishes, alcoholic beverages, and potato/corn/other chips.
b: NHANES = National Health and Nutrition Examination Survey.
c: The miscellaneous category includes items such as sugar substitutes, unreconstituted cocoa powder, powdered butter replacement, and cornstarch.

[^0]:    e: Specific food contributing at least 1\% to orange vegetables: grain-based desserts.

[^1]:    Other beverages include milk substitute and evaporated milk, soda (low-calorie), fruit drink (low calorie), and vegetable juice, each contributing less than $2 \%$.
    Percentages do not add to $100 \%$ due to rounding.
    Data source: NHANES 2005-2006
